CATALOGUE 2023

Branded promotional clothing & workwear

New shirt
Journey

see page 155 for more ▶

Branded clothing for the whole Europe

Dear Business Partners,

It is my pleasure to address you as I introduce another edition of our annual product catalogue. Although I usually favour rather positive tones, I cannot avoid mentioning, at the very start, that our catalogue was produced in a period of the great political and economic turmoil of 2022. Most of us can hardly believe that 2023 will not be difficult for everybody. Our team is doing everything we can to continue to be a safe and reliable partner for you in times of uncertainty. I believe that together we can look forward to the years ahead with confidence.

For 2023, we bring some exciting updates. The cut for our new shirt was prepared by Roman Humlíček, one of the best tailors in the country. We support our sustainable business by offering a range of certified products made from recycled polyester and organic cotton, now including also GOTS-certified polo shirts.

Our commitment to you and your clients is also reflected in the RIMECK workwear sector, where we continue to innovate with new polo shirts. Some products from the MALFINI promotion series have also undergone modifications; as they gained popularity in the workwear sector, they have been moved to be part of the RIMECK brand.

We greatly appreciate the trust you show us through our increasing cooperation. Our team is ready to provide you with even higher levels of service this year and in the coming years and to achieve business success together. Thank you.

Radek Veselý
Chairman of the Board of Directors

PRAGUE

included among the fashion capitals

Malfini Technology Fashion Centre confirms the fact

“Prague is destined to become a city of fashion,” said Jean-Paul Gaultier, the world-famous French fashion designer, on his first visit to the Czech Republic almost twenty years ago. And the present is proving him right since, according to the ranking of fashion capitals, the Czech city ranks among such big names as Paris, Milan and New York. Consequently, it is not surprising that MALFINI has chosen Prague as the seat of its Technology Fashion Centre because the Czech capital is not only beautiful and romantic – it also connects different cultures, and its cosmopolitan character is reflected in everything created here.

At the Malfini Technology Fashion Centre, people from all over the world design products that match current fashion trends in terms of design and quality. Employees of different nationalities meet in the same corridors, so diversity within the team comes naturally to us. Thanks to the harmony between us, the best that the promotional wear sector has to offer evolves here.

The fact that our Technology Fashion Centre is located in the heart of Europe gives it great connections to all the key fashion cities. Trends surround us, and we can react quickly to them. Thanks to this, MALFINI has managed to transform the perception of promotional textiles and bring them to the level of real fashion, And the Malfini Technology Fashion Centre will continue to do so.

We photograph our collections in the Czech Republic

Thanks to its diversity, our country has a lot to offer

In sports terminology, playing on your home field is always an advantage, and the Czech Republic offers us a wealth of beauty, whether we're talking about Mother Nature or technology. The contemporary buildings of Prague, the city of a hundred spires, formed the backdrop of this year's MALFINI collection shoot.

We combined the clean lines of our products with the success of the sports hall in Břežany. Its unusual shape and the smooth metal surface made of aluminium shingles won it three major awards in 2018: The hall was the outright winner of the Czech Grand Prix of Architects, won the National Award for Architecture and was named Building of the Year.

The Troja bridge (Trojský most) also provided an impressive stage, literally blurring the boundaries between architecture and engineering skills. The European Steel Design Awards jury declared it a genuine sculpture, granting it the Award of Excellence.

The Škoda ICERINK complex was an exciting photoshoot location; it won the Building of the Year award for 2018 in its category. It offers visitors year-round operation with cutting-edge facilities and two ice rinks, the quality of which could be recognised at the NHL level.

Designs of the highest quality and good materials are what we value at MALFINI. This was exactly what the National Memorial on Vítkov Hill in Prague offered with its timeless design. Even though it's almost a century old, its clean lines fit comfortably into the present.

Jarda Šimandl is one of the prominent figures in Czech commercial and advertising photography. His work combines classical creative methods and modern technology, depicting objects, faces and objects in the landscape in an original way. He is a graduate of the legendary last class taught by Professor Ján Šmok at FAMU, majoring in artistic photography. Jarda has presented his works at numerous exhibitions in the Czech Republic and abroad and collaborated with many famous personalities. Of these, at least one must be mentioned here: Tereza Maxová, a famous Czech female model.

It's unusual for a photographer and a brand to stay loyal to each other for so long. You and MALFINI made it. How did your collaboration come about?

2008 was a very busy year for me; my big exhibition of large-format photographs was underway in Mánes gallery. In the middle of it, Malfini – Adler at that time – called to say hello.

Considering my workload, making arrangements took quite a long time before everything clicked into place in 2010 to our mutual satisfaction. Our first collaboration was in Peschici, Italy, where I had an exhibition. It was the knowledge of the area and the people that was reflected in the great results. We returned to the same venue once again; it is an ideal place for a photographer with a diversity of settings and a perfect fit for the company's products. Everyone enjoyed it very much and felt united for a long time afterwards.

Sites are very important for photographers. What guides you when you are choosing them?

The place for a photograph to be taken is one of the important aspects that we have to agree on with the customer. It has to have the spirit of the place; it has to radiate emotion; simply, it has to have a distinctive atmosphere. In the context of the products photographed,

obviously. Hence the exchanging of our advice with people from MALFINI. I respect the specifications, so MALFINI is responsible for their final decision on the setting and atmosphere.

Finding the right location is never easy. And if you have it, there's no guarantee that you'll find it in the condition you expect when you arrive on the day. You may find the stylish concrete wall you selected has been spray-painted overnight. Then improvisation must come into play. We might also encounter the fact that what seems nice through my wide-angle vision is not the same in a close-up of a product. Last but not least, the weather is also a factor. In recent years, MALFINI and I have been focusing more on the connection of textiles with the beautiful places of this country where the certainty of sunny days is not guaranteed.

Trends in textiles are evolving rapidly. Is it the same in advertising photography within the sector?

In addition to the general trends in visual culture, technical developments have a strong influence in this area, which is undoubtedly reflected in the locations I mentioned. Technical buildings, whether highly modern or historical, concrete, metal and glass are becoming trends. That is why we are currently focusing on interesting structures within the Czech Republic; this way, the company will introduce them to its customers in Europe.

We are generally experiencing a transition from the analogue to the digital age. Being able to check the photo you just took is a considerable asset. Equally great is the ease of post-production. Taking photos actually continues as you sit at the computer. Digital technology, with its advantages, is available to everyone, but you can't take a good picture without the right photographer's eye.

A significant trend is undoubtedly the minimisation of retouching, which is preceded by simplified arrangements. The result is then closer to reality. Sometimes you don't know if what you see was intentional or if the photographer didn't even know they had done it. In my opinion, it leads to a lot of uniformity, and I don't like to conform to strong fashion trends. But I'm a professional, and with clients like Malfini, we always come to an agreement and mutual satisfaction.

What do you enjoy about working for MALFINI and photography in general?

For commercial work, I like it when the client knows what they want and can outline it. And that's precisely what the people in MALFINI are good at. It's remarkable how they can frame their thoughts and communicate their ideas and requirements in this regard. This is also one of the reasons why I still enjoy photography as much as I did in the beginning. Sometimes my idea is very clear, and it is produced exactly; sometimes, I hesitate and search. However, even a final and precisely elaborated idea can be influenced – not only outdoors – by details, bad or good luck, the location as such and weather or light. Taking photographs can never be boring.

Every step of the production process can be made sustainable

For fashion to be truly sustainable, it is not enough to look at where clothes come from or what the material is dyed with. The whole thing is much more complicated than that. However, globally respected certificates can help producers make responsible choices.

Good practices are inspected by certification companies

Certification firms rigorously check compliance with organic and ethical production practices. However, there is a wide range of evaluation systems in existence. Some businesses monitor only one of the categories, while others inspect all of them. Most often, certifications consider whether organically grown material is used, whether it was produced by recycling and how environmentally friendly

the production processes are. They also look at how the company protects the environment, whether or not its conduct is ethical and fair towards the employees and communities, whether animals are abused, or whether goods contain animal products.

For example, if a product is labelled organic, the material has been grown without harmful chemicals and with respect towards natural resources. But it says nothing about its subsequent processing or the conditions for employees. Similarly, for certifications that focus solely on fair wages for workers, we have no information on how the crops are grown. However, systems do exist that look at the matter holistically. And you will find them throughout our operations too.

If you want organic material, look for GOTS

The GOTS (Global Organic Textile Standard) is one of the world's most stringent certifications that monitors standards for the processing of textiles, particularly organic fibres. To obtain and maintain this label, producers must be regularly inspected by independent bodies and meet the requirements for careful and ethical practices throughout the production process. This way, GOTS covers the life cycle of textiles from crops through processing to printing and finishing.

The primary focus of the GOTS criteria is on the proportion of organic fibres, environmentally friendly production practices and responsible management of natural resources and waste. The use of hazardous chemicals is prohibited throughout the production process, whether in the form of harmful pesticides during cultivation or toxic paints during subsequent processing steps. The GOTS system also sets out requirements for a safe working environment and fair pay for workers.

Recycling is the future. It is monitored through GRS

The GRS (Global Recycle Standard) certification aim to increase the use of recycled material in the textile industry. The systems set requirements for a minimum proportion of recycled fibres. To carry the GRS label, products must contain 50 to 100% recycled material.

GRS looks at how textile production affects the natural world and people's lives. This standard consistently requires environmentally friendly manufacturing practices that protect the environment. All steps must be carefully recorded, including resource consumption and waste management. Hazardous chemicals have no place in production, and manufacturers must ensure a safe working environment and adequate compensation for their staff.

At MALFINI, Corporate Social Responsibility (CSR) and a circular economy are not just slogans for us. Just as we treat our customers and employees with respect, we manage our surroundings and the environment.

We want to dress the world responsibly

We take social responsibility into account in our daily work since employees from all departments are involved in our CSR Committee. We strongly focus on the environment, reducing our carbon footprint and sustainable production. We have concentrated on our fleet of vehicles, which now consists of CNG vehicles, and we have upgraded our electric cars. Using a quarter of the surface area of the roof of our Ostrava warehouse, we are preparing to expand our solar power plant, which will provide us with another source of green energy. In 2030, we want to reduce direct emissions from our business and indirect emissions from energy consumption to an uncompromising zero.

We help others

In the social sector, we have increased our focus on education for children in Dhaka, Bangladesh. In addition to the traditional contribution to the Chalantika Education Centre, we provided financial aid for 13 children to ensure their further education. In the long term, we help disabled children with our T-shirts during the KlapeTo hiking trip to the Sněžka Mountain and support premature babies in the Ostrava region on the occasion of the Polanský run. We have also started projects to help SOS villages in Croatia and Hungary. Furthermore, we continue cooperating with the TyfloCentre in Ústí nad Labem and the Department of Informatics at the Jan Evangelista Purkyně University in the same city.

Giving materials and products a second life

Our membership of the Institute of the Circular Economy (INICIEN) confirms that we at Malfini are serious about a circular economy. Together with other companies and organisations, we are committed to making the Czech Republic a diverse and prosperous country that knows how to manage its resources well. INICIEN is our partner in the quest for better material management and a guide on the road to an efficient, sustainable and prosperous economy.

Thoughtfulness as a strategy for the coming years

It will take time and a lot of effort before we can truly achieve a fully circular economy. Similarly, we would like to move up from CSR to ESG (Environmental, Social and Governance) – socially responsible investing.

We are happy to see that people are no longer indifferent to which company they buy products and services from, which company they work for or where they invest. They are eager to know whether or not the company is fair to its employees and customers, how environmentally friendly it is and if it donates money to charitable causes and acts transparently, following the law. At MALFINI, we are already thinking about all this and are looking for new opportunities to be even better.

We have become a member of Textile Exchange, a global non-profit organization driving positive action on climate change across the fashion and textile industry.

OUR brands

MALFINI® ¹²⁹

Real products for real people

Malfini's wide range of products always has the right outfit for work, sports, or meeting with friends. Choose from an extensive variety of colours, diverse styles and comfortable materials, including organic cotton and recycled materials.

MALFINI Premium® ¹⁵³

In each detail

There is much more to this brand than just a name. MALFINI Premium appeals to anyone who prefers exclusive materials and quality workmanship. For instance garments using high-quality Supima cotton and premium merino wool, giving them an exceptionally soft and subtle feel. Sophisticated cuts are a standard feature here. Journey – a shirt by the leading Czech tailor Roman Humlíček - is the latest addition to this unique collection.

Piccolio®

Piccolio® ¹⁴³

For every moment

Playful colours and simple branding – that's what Piccolio offers. A rich palette of shades exists to choose from – lively and vibrant ones included. We have also customised the products to facilitate printing or embroidery as much as possible, and we even went beyond that: Labels in some articles can be simply torn off, so getting your own collection of T-shirts has never been more accessible.

RIMECK®

RIMECK® ¹⁸⁵

Workwear made real

Rimeck has managed to link the high expectations for workwear with fashion trends. This makes our products stand up to all the challenges and look great at the same time, as we look at four key aspects in each one: Impressive design, precise production, top-quality materials & of course, your safety first.

JOURNEY: The 'Czech road' to shirts

Designed for perfection

"The journey is the destination" - we could use a hackneyed quote to describe our Czech approach to making shirts. It was not the easiest task, but thanks to Malfini's connection with the respected designer Roman Humlíček, an exclusive collection of women's and men's shirts is now available. Even when we first met this man, we knew there would be a positive outcome. After all, this professional tailor worked for the Blažek Clothing Company for 16 years and now operates his own studio for successful domestic and foreign clients.

This expert's valuable experience perfectly aligned with our product team's ideas. The new collection of shirts is changing how fashion is perceived in promotional textiles. By combining traditional craftsmanship with cutting-edge technology, we have created a garment with a perfect cut, quality and attention to detail. A minimalist, slightly open collar complements the neat front placket. The sleeve ends feature rounded cuffs with a single button, making it the perfect choice for everyday wear as well as for special occasions.

You will also like the shirts because of the material used. Thanks to high-quality technology and the use of fine double-woven yarns, very fine interlacing is achieved. This creates subtle yet visible diagonal lines that give the twill weave a neat and modern look. It is a popular, non-wrinkle fabric with high breathability and is pleasant to the touch. An indisputable advantage for maintenance is the surface treatment, which increases the material's flexibility. It prevents fraying during wearing and washing, making the material more stable in form, less wrinkled, easy to iron and stable during washing.

We believe you will be as excited about our premium Journey shirts as we are. Enjoy this piece of clothing!

re-VOLUTION

recycled collection

Each of us can help The Earth. It is necessary to change the approach to sustainability. For example, by starting to wear clothes made of recycled materials more.

Endless tonnes of waste devastate nature, fill the oceans, forests and mountains. And that's why it is important to pick up every plastic bottle and give it

a chance for a new life. It may become a valuable raw material in the production of clothes.

Recycled materials are the future of the clothing industry. It's up to us to give them and our planet a chance. When we now support recycled products, we'll change the whole future together. And it's worth it.

All of us can help nature!

GOTS

organic collection

Every product that bears the Global Organic Textile Standard marking meets the most stringent rules for growing and producing organic textiles. Respected GOTS certification guarantees eco-friendly and ethical production and organic quality of the actual products worldwide. So, it protects responsibly the environment, the health of employees and those who wear organic-cotton clothing. Seeding, tending to the plants, harvest and fiber processing must be done without chemicals.

Only species without genetic modification are cultivated at farms, and the soil obtains nutrients from farmyard manure and compost. Artificial fertilisers, pesticides or insecticides aren't used, and natural procedures are only applied. Simultaneously, GOTS oversees fair and safe working conditions for all the employees in the field and in the factories. Thanks to this certification you're sure that you wear really ethical clothes.

LABEL FREE

collection

Imagine a T-shirt as a clean cloth on which your imagination will blossom in full. Products of the Label Free line are already waiting for you to light them up with your own original prints or embroidery. You and your author collection will always play the lead role as you can easily add your own tag to all the products. You would look for a tag with the Malfini brand in vain because the clothes haven't got any. So, you don't have to take it off in a complicated manner and you can focus on your own design instead.

We have taken great pains to ensuring high quality of the materials and modern cuts. Thanks to the silicone finish, our textile items are smooth to touch, have silky gloss and, above all, retain their colour for a long time. Let your creativity loose and become a fashion icon!

collection

After all, stripes were already loved by Coco Chanel

Some patterns simply don't get old. And stripes are definitely one of them. Ride a wave of timeless fashion and choose from sailor's items for adults and children.

Vests or T-shirts will not only stylishly underline an outfit for a boating trip but they'll also be greatly suitable for wearing in the city, for a meeting or a party. High quality and precise execution of cuts are a matter of course. Print a team slogan or logo on to them and lift anchor. Set sail!

MALFINI®

MALFINI®

Real products for real people

Malfini brand portfolio is rich and, in particular, cleverly compiled. That's why you will enjoy clothes of this line both in a busy city and in a calm place in the great outdoors. Thanks to a variety of materials, styles and colours you'll find among them a perfect outfit for use at work, for doing sports or, for example, for use in a café. You can also match up your clothes in a pair or in a group as we manufacture our clothing mostly in a duo or family concept.

T-SHIRTS

Two billion T-shirts are produced worldwide every year. Yet few people had heard of them at the beginning of the 20th century. T-shirts appeared to a larger extent only during World War I and, thanks to attractive designs, gradually entered into everyday life. Interestingly, printing something on clothing is nothing new; the principle was known as early as in ancient China. Initially a practical piece of workwear, T-shirts have become a phenomenon with space for self-expression and art.

ELASTANE

Fine and strong, yet elastic polyurethane fiber. The key feature is its high elasticity, as elastane can be stretched out from three up to seven times of its original length - without breaking. It is always used in combination with other fibers to ensure dimensional stability, increase elasticity and reduce the wrinkling of the final fabric.

* Material composition may differ: colour 12 - 85 % cotton, 15 % viscose

POLO SHIRTS

People discovered the magic of tennis and other modern sports about a hundred years ago. To really enjoy them, they needed to replace impractical clothes with something more comfortable. Because of this, the rolled-up sleeves of classic white shirts were replaced by a novelty – a polo shirt, which retained its neat appearance while providing the desired comfort for sportsmen. It is these qualities that have made the “polo”, as this item of clothing is called to this day, an essential part of every wardrobe.

SHIRTS

Why do men's and women's garments fasten on different sides? There are many theories. One, for example, speaks of men being better prepared for battle with the buttons on the right side as it was quicker to throw off their coats and draw their swords. Another mentions easier work for maids who dressed their mistresses. Whatever the reason, this rule has been retained for shirts as well. These used to be exclusively for men, but during the emancipation movement, they entered the wardrobes of the opposite gender. Although the shirt is one of the oldest pieces of clothing, it has not lost any of its popularity, even today. This is supported through innovative cuts and ever-improving materials.

SWEATSHIRTS

The predecessor of the sweatshirt was a long coat with a hood, which protected not only from the weather but also from unwanted stares. But today's sweatshirts are just begging for attention. They are produced in imaginative designs that reflect current trends. Music groups and various movements lent them their specific styles. They also attract the attention of fashion designers who elevate them to exclusive levels: The most expensive sweatshirt sells for an impressive \$26,000.

FLEECE

It's warm like wool, but it's not wool. What's that? Fleece, of course. This modern material was developed in response to the demand for a knitted fabric that would be lighter and more cost-effective than its natural predecessor. The softness and the excellent thermal insulation properties of fleece are provided by its specific finish. The fibres are combed on both sides and cut to the desired length. The environmental aspects are also worth mentioning. Fleece clothing is exceptionally durable, and recycled PET bottles are often used to make the material.

decorative stitching
antipilling finish on the outer side

FROSTY 529

Kids Fleece

Fleece, 100 % polyester, antipilling finish

▲ 220 g/m², 6 years/122 cm, 8 y./134 cm, 10 y./146 cm, 12 y./158 cm

insulating fabric
full-length coil zipper with chin protection
pockets with coil zipper
bottom hem adjustable by elastic drawstring
decorative stitching
antipilling finish on the outer side

ANTIPELLING FINISH

Antipilling finish minimizes the release of fibers and prevents fabric's pilling. This process results in fibres fixation and stabilization. It reduces damaging of the upper part under excessive use and friction and extends the product lifetime and functionality.

OUTDOOR CLOTHES

There is no bad weather, just inappropriately dressed people. Our range of outdoor clothing supports this well-known saying. Jackets and vests of various cuts effectively protect against wind and rain. At the same time, they are breathable and soft, so they are comfortable to wear. Softshell is of pivotal importance here; it appeared on the market in the 1970s and is still one of the materials used to a vast extent to this day.

NANOTEX® RESISTS SPILLS

Certified fabric which has been fundamentally transformed through nanotechnology. The resulting fabric repels liquids, thus extending the lifetime of the jacket and helping it retain the natural softness and breathability. When a liquid comes into contact with the fabric, rather than sinking into the fibers, the fluid beads roll right off the surface without leaving a mark.

PERFORMANCE 522

ACTIVE

Coats, shirts and uniforms used as sports clothes of the past century had strict rules for how, and from what, they were made. As sport became an integral part of the modern lifestyle, as an escape from the everpresent stress – a way to relax both body and mind – sports clothes changed. Comfortable, airy and functional are the new rules, leading to rising use of cutting-edge, quick-drying and breathable, fabrics.

CAPS AND SCARVES

While the baseball cap may seem like a modern accessory, it's actually nothing new. A cap with a hard peak was first shown to the world by the Brooklyn Excelsiors baseball team in 1858. Because it was a handsome and practical item, it was soon adopted not only by the other teams, but also by their fans. From there, it was just a step beyond the gates of sport.

TERRY TOWELS AND BAGS

We use both groups of products every day, which is an excellent reason to make them beautiful and practical at the same time. We are talking about towels and cloth bags. Ours can even be eco-friendly. For example, our bathroom textiles range includes certified organic cotton products. For cloth bags, they are made of durable material to last a long time and help us protect the environment.

MALFINI PREMIUM®

In each detail

When it comes to exclusive clothes, there's no place for compromise. That's why our Malfini Premium brand reflects the latest trends, excellent quality plays first fiddle and unique natural materials are the basis. It's only in this way that we'll interest you, the most demanding customers. You'll combine premium outfits for Urban fashion, office or for entertainment precisely according to your taste. For instance, in vivid colours, current shades or timeless neutral tones.

If you rank among those who like exceptional natural fibres, SUPIMA® cotton will be the right choice for you. This variety is cultivated in mere 1% of the land from the total area where cotton is produced. It has got twice longer and stronger fibres than ordinary kinds, so it is extremely resilient and soft. Premium merino wool is a similar case. The sheep out of which this premium fibre originates live in a clean mountain setting, which lends a unique character to their fine wool.

All the clothes from Malfini Premium brand will win your favour with their quality and modern look. Malfini Premium brand products have been designed in a duo concept. You can easily adapt it with printing or embroidery to your company or club. You can give members of your team and business partners pleasure in wearing outstanding materials, while strengthening the value of your brand.

 fixing shoulder seams
 cotton treated by mercerization

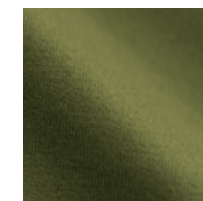

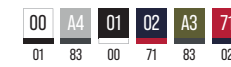

GRAND 269

Polo shirt ladies

Single Jersey, 100 % mercerized cotton

160 g/m², XS - 2XL

slight fit cut with side seams
 1:1 rib knit collar with a contrast stripe
 narrow placket with 5 buttons in the shell fabric colour
 slits in side seams with a contrast tape
 inner neckline with a contrast tape
 fixing shoulder seams
 cotton treated by mercerization

MERCERIZED COTTON

The process of mercerization consists of immersing the cotton yarn into a bath for the purpose of changing their sections and leveling uneven fibers. The fiber cross-section thus obtains an almost perfect shape. The final material becomes smoother shinier and softer. Merceration results in higher strength and better color stability of the material.

MERINO

Characteristics

Merino wool is world renowned for its soft, yet firm feel, offering advantages in every area over common wool and many other fibers. The reason for these qualities is the size of an individual fiber – and merino wool fibers are very fine, thinner than 18 microns. As such, it is used in every area of fashion from haute couture robes to highly functional garments.

This natural wool is sheered from the Merino breed of sheep, kept in natural environment (open field), with most of the production comes from Australia, New Zealand and Argentina. Because sheep don't stop growing wool, they need to be sheered every year. Not only is wool a renewable resource, it is also biologically degradable – after you throw it out, it will decompose and provide soil with nutrients.

HOW TO TAKE CARE OF IT

You can use washing machine up to 40°C temperature, making maintenance easy. Of course, we recommend washing inside out and with similar colours. To preserve the shape, avoid drying in direct sunlight and heat, and iron using only steam at medium temperature. If your merino clothing catches a slight odor, just airing it properly should be enough to remove it.

BREATHABLE

Wool fibers can absorb a lot of moisture and lead it away from the body, and merino wool is even better at it.

THERMO REGULATING

Unlike synthetic materials, merino fiber is active and reacts to changes in body temperature. It retains heat when the weather is cold, and cools the skin when it's hot.

ODOR RESISTANT

Merino wool has antibacterial effects and absorbs sweat. Clothes from it stay nice and fresh much longer, even in rougher conditions.

NATURALLY ELASTIC

Each fiber works like a small "spring", expanding and contracting back into shape. The fabric, as a result, doesn't wrinkle.

PLEASANT TO WEAR

The fine, flexible fibers of merino wool make it very comfortable overall. It is soft to the touch, pleasant to wear even directly on skin, unlike most other types of wool.

MERINO RISE 157

T-shirt Men's

Single Jersey, 100 % merino wool

17,5 µm, machine wash

▲ 190 g/m², S - 3XL

BAMBOO FIBER

Fiber made of bamboo based on regenerated cellulose. It has thermoregulatory, antibacterial, antimycotic and antistatic properties. Bamboo fiber is stronger along with three times higher absorbency than cotton, resistant to frequent washing and keeps its properties for a long time. We do not recommend using fabric softener in order not to reduce absorbency of the material.

RIMECK®

Workwear made real

Working clothes aren't decided on just by high demands of professionals who wear them every day. Fashion trends rule there as well. It's no wonder; after all, we spend most time of the day at work and deserve to look and feel good. That's why we keep moving the boundaries, devoting ourselves to design, improving the quality, style, functionality and, above all, safety in the Rimeck brand. Our HIGH VISIBILITY line is ideal wherever safety at reduced visibility is of paramount importance.

After all, its qualities are certified by certification based on European standards. In addition, the new VERTEX collection is a perfect example of how customers' needs are reflected in our products. We left nothing to chance when designing them and didn't allow any compromise. So, whatever you experience during your work commitments, you'll appreciate their resilience, smart design and function materials.

VERTEX

luxury collection by RIMECK®

The new VERTEX collection combines technologically advanced fibers, comfort and an outdoor look. Workwear can thus be highly durable, flexible and stylish at the same time!

WATER RESISTANT TREATMENT

The waterproof TPU membrane resists moisture penetration very well while maintaining the flexibility of the entire material. Water column 10 000 mm.

BREATHABLE MATERIAL

The 3-layer material helps to regulate water vapour, reliably moving it away from the body and creating a feeling of comfort. Breathability of 4,000 g/m²/24 hours.

THERMAL REFLECTIVE ZONE

Thermo reflective zone on the back.

CORDURA

The use of CORDURA® material makes the trousers even more resistant, especially against punctures or tears.

CERTIFICATION

EN ISO 13688:2013 – Protective Plaining - this international standard specifies the general requirements for the implementation of protective workwear in terms of ergonomics, safety, size designation, aging, marking of protective Plaining and the information which is supplied by the protective Plaining manufacturer.

EN 14404:2004+A1:2010 – Personal protective equipment - Knee pads for kneeling work - The standard specifies requirements for knee protection for kneeling work where there is a risk of injury due to surface mechanical effects. The protectors must be harmless to health and safe for the users.

washable at 95 °C (white) and at 60 °C (colour)
cut with slits in the side seams
1:1 rib knit collar and sleeve hems
placket with 3 buttons in the shell fabric colour
inner neckline with a shell fabric tape
fixing shoulder seams
separated pocket for easy branding

00 94 01 02 05 06 04 11 07

SEPARATED POCKET FOR EASY BRANDING

The pockets of these polos are delivered separately, allowing easy branding on them. Printing and embroidery has never been easier.

PRESHRUNK COTTON

During the production process of cotton products the space between the fiber gets reduced which eliminates the risk of shrinkage of the fabric during the washing and drying cycle. This process allows the final product to be washed at high temperatures for the purpose of removing any impurities and bacteria.

 New product. More information about stock availability will be provided by our sales department.

RESIST R01

T-shirt Men's

Single Jersey, 100 % pre-shrunk cotton,
▲ 160 g/m², S - 4XL

preshrunk cotton resistant to higher temperatures
washable at 95 °C (white) and at 60 °C (colour)
cut with side seams
neckline trimmed with 1:1 rib knit fabric
fixing shoulder seams

00 94 01 02 05 15 06 95 04 11 07

RESIST HEAVY R03

T-shirt Men's

Single Jersey, 100 % pre-shrunk cotton,
▲ 200 g/m², S - 4XL

preshrunk cotton resistant to higher temperatures
washable at 95 °C (white) and at 60 °C (colour)
cut with side seams
neckline trimmed with 1:1 rib knit fabric
fixing shoulder seams

00 94 01 02 05 06 04 11 07

RESIST R02

T-shirt Ladies

Single Jersey, 100 % pre-shrunk cotton,
▲ 160 g/m², S - 3XL

preshrunk cotton resistant to higher temperatures
washable at 95 °C (white) and at 60 °C (colour)
slight fit cut with side seams
neckline trimmed with 1:1 rib knit fabric
fixing shoulder seams
shorter sleeves

00 94 01 02 05 15 06 95 04 11 07 47

RESIST HEAVY R04

T-shirt Ladies

Single Jersey, 100 % pre-shrunk cotton,
▲ 200 g/m², S - 3XL

preshrunk cotton resistant to higher temperatures
washable at 95 °C (white) and at 60 °C (colour)
slight fit cut with side seams
neckline trimmed with 1:1 rib knit fabric
fixing shoulder seams
shorter sleeves

00 94 01 02 05 06 04 11 07

RIP STOP

Very strong, regularly repeating weave. In this smooth fabric, thick warp and weft threads are interwoven in intervals of 5 - 8 mm. The surface gets an effect of a grided structure. This apparent grid significantly increases the fabric's resistance to ripping and tearing.

CASUAL 550

softshell jacket Men's

Knitted softshell: 100 % polyester; micro fleece - 100 % polyester

Softshell: 96 % polyester; 4 % elastane; micro fleece - 100 % polyester

MARKETING

support

ONLINE SUPPORT

API connection of our e-shop with your e-shop or system.

Data export of products.

Online access to all marketing materials (product photos, image photos, videos, POS, product cards, certificates, PPC banners).

Online catalogue for your customers with the possibility of sending an inquiry.

MALFINI interactive catalogues.

SAMPLE PACK

Custom mix of MALFINI®, MALFINI Premium® and RIMECK® products with **25 % DISCOUNT**.

How to order Sample Pack:

Minimum amount of selected products is 10 pcs (max. 1 pc of colour and size).

You can order your own Sample Pack up to 4 times per year under the conditions above.

Orders are possible only with help of our Sales Department (e-mail: sales@malfini.com).

PRINT

and embroidery

DIGITAL PRINTING

An ideal technology for orders of a low quantity. A direct print is made on a state-of-the-art KORNIT® printer by using special water-based pigmented inks. The printing is of a photo quality and resolution and is guaranteed to be wash-resistant up to 40 °C. The textile can be ironed from the reverse side.

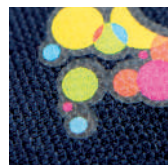

SUBLIMATION PRINTING

Is suitable for textiles made of at least 65 % synthetic fibre. Disperse dye is printed on a sublimation paper underlay from which it is transferred to the textile in the form of vapour by using heat and pressure. The stability of colours is very good, imitations (significantly more expensive) of colourful woven goods are barely distinguishable from originals. In addition, the original material properties such as breathability and washability are preserved. This printing method is ideal for transferring photographs and is suitable for piece as well as serial production.

SILK-SCREEN PRINTING

The oldest and so far the most effective textile printing technology. We use a machine which enables us to reach high daily production (up to 15 000 prints) while maintaining the same print quality from the first to the last print of the order. Thanks to this technology we are able to print practically any motif - from the simple and monochromatic to the photo-realistic one. The printing is guaranteed to be wash-resistant up to 40 °C. The printing can be ironed from the reverse side.

TRANSFER

Method where the design is first printed, using silk-screen, onto a transfer foil, fixed by glue and then transferred from the foil to the textile with heat and pressure. It's a very versatile method, usable on almost any textile, and is used mainly when direct silk-screen print is not possible. Only water repellent materials are unsuitable for this type of printing, and the printed clothes can be ironed from the other side.

LASER ENGRAVING

The modern technology allows engraving on the textile by using a laser beam. It is unique and so far uncommon branding of fleece products. The final motif is burnt into the fabric (it's plastic) and so lasting forever. Since there is no paint or yarn application, the resulting graphic is unicolour - same colour as the textile.

EMBROIDERY/EMBROIDERED PATCHES

This is a very high-quality way of presenting motives, logos or slogans on textile products. To be able to sew a certain motif onto a product we have to create an embroidery pattern for which we need to get a high-quality digitized model(.tif, .cdr, .pdf, .ai, .epg). Then your design is transferred into the sewing machine's program and is embroidered either directly on the product, or in the form of a patch sewn or glued on it.

PRESSING

Suitable for 100% cotton products without buttons and zips that could be damaged by the pressure. This technology enables pressing of products into a shape chosen by you so you get an unusual gift or promotional item. You can select from our library of shapes or send us your own design.

GLITTERING STONES

This special technology can be used for any design size and colour combination. The transparent or opaque stones are available in sizes from 1,5 to 8 mm. The minimum order for textiles with this application is 200 pieces. Products decorated this way have to be washed inside out at up to 40 °C.

MATERIALS

fabric and finishes

NATURAL MATERIALS

COTTON

The most popular natural material in the fashion industry. Cotton is characterized by properties such as softness, pliability, strength, absorbency and breathability. It is pleasant to the touch and resists higher temperatures. It is often used in combination with synthetic materials or elastane.

ORGANIC COTTON

Cotton produced from ecologically controlled agriculture and further processed under the strict inspection of all manufacturing processes. The biggest producers are Turkey, India, the USA and China.

BAMBOO FIBER

Fiber made of bamboo based on regenerated cellulose. It has thermoregulatory, antibacterial, antimycotic and antistatic properties. Bamboo fiber is stronger along with three times higher absorbency than cotton, resistant to frequent washing and keeps its properties for a long time. We do not recommend using fabric softener in order not to reduce absorbency of the material.

MERINO WOOL

Active fiber that regulates body temperature changes and is one of the most breathable natural fibers. The fiber can absorb large amounts of moisture – along with odour molecules in the sweat. Natural elasticity maintains dimensional stability, and the fabric is easy to maintain.

VISCOSE

Fiber made based on regenerated cellulose. The input raw material for the production is wood or cotton pulp. Viscose is breathable and it has great absorption features. Compared to cotton, it is softer, shinier and finer.

SYNTHETIC MATERIALS

ELASTANE

Very fine, strong, elastic polyurethane fiber. The key feature is its high elasticity. Elastane can be stretched out from three up to seven times of its original length without breaking. It is always used in combination with other materials, ensures dimensional stability, increases elasticity and reduces material wrinkling. Elastane is prone to high temperatures.

POLYESTER

Synthetic fiber made by modification of the input material. The fiber is very strong so it can be made thick or very fine (micro polyester). Material is durable, quick-drying and easy-care. It is suitable for sports and physical activities. Through chemical and mechanical processes various modifications of the material properties can be achieved depending on the purpose of use (insulation, impregnation).

POLYAMIDE

The process of polyamide production is similar to the one of polyester. The material is durable, easy-care and has a good shape stability. It dries quickly thanks to low moisture absorption. It has twice the greater abrasion resistance than polyester. The fiber can be made thick or very fine as well as polyester. Mechanical and chemical treatment influences the final product's properties.

POLYPROPYLEN

Smooth and hard surface fibres have high abrasion resistance. They show good hydrophobic properties which, due to very low water sorption, preserve the strength and dimensional stability of the material even in damp environments. The final material is lightweight and shows good thermal insulation.

POLYETHYLEN

Currently the most widely used polymer in the world, characterized by high strength, friction resistance, zero moisture content and chemical resistance. Thanks to its properties it is ideal for the production of safety protective equipment protecting against mechanical influences and wear.

RECYCLED POLYESTER

The fibers are made by recycling consumer plastics (PET bottles, plastic packages and other waste material). The advantage is the consumption of less energy during production, they leave a lower carbon footprint and reduce environmental pollution. By recycling we achieve the same quality and properties as with ordinary polyester.

BRANDED MATERIALS

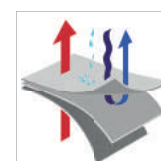

SUPIMA®

The brand represents the finest cotton of 1% worldwide production. This type of the US grown Pima cotton has over a hundred years' history. Its unique extra-long fibers are twice the strength of regular cotton. They are resistant to pulling, breaking and tearing which makes products made of it incredibly smooth, resistant, non-pilling and keeping their appearance for a long time.

Nanotex® Resists Spills

Certified fabric which has been fundamentally transformed through nanotechnology. The result fabric repels liquids, extends the lifetime, retains natural softness and breathability. When a liquid comes into contact with the fabric, rather than sinking into the fibers, the fluid beads roll right off the surface without leaving a mark.

SOFTSHELL

Softshell is a laminated textile for modern and sports plain weaving and plain weaving for outdoor activities. It is divided into membrane and nonmembrane. Plain weaving made from this material is light, warm, elastic and has high mechanical resistance. Softshell with a membrane can be waterproof and simultaneously air permeable.

CORDURA® CLASSIC

The CORDURA® fabric is made in accordance with approved standards of the company INVISTA. CORDURA® holds off stains, resists tears and abrasions like no other fibers. Its strength ensures high longevity. CORDURA® is a registered trademark of INVISTA for durable fabrics.

3M™ STRIPES

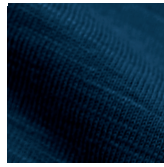

3M retroreflective stripes increase visibility of the person who wears the garment, thereby reduce possibility of accidents. 3M™ technology of reflective materials is based on a layer of microscopic glass spheres mounted on the substrate fabric layer with a mirror surface. On 1 cm² of the fabric there are up to 30,000 glass beads.

SEGMENTED STRIPES

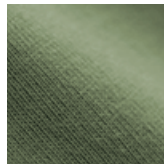

Retroreflective stripes are used to improve visibility during night and bad optical conditions. They are designed for use on safety clothes, with flexibility in mind, preserving full range of motion. These stripes are thermally applied, and can handle washing very well.

FABRICS

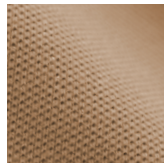

SINGLE JERSEY SLUB

Fine weft knitted fabric with characteristic structure of slub fabric. To achieve this final effect, a yarn with thicker and thinner sections is used throughout the length which are created by varying the tightness of the twist. This fabric is also characterized by its elasticity.

SINGLE JERSEY

Fine weft knitted fabric with characteristic dendritic columns on the outside and arches on the reverse side. The weave features ductility, softness and easy unstitching. The quality of the final product depends on the thread used for making the fabric. Products are manufactured from high quality ring spun thread.

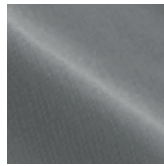

PIQUE

Weft knitted fabric patterned with geometrical relief on outside. On the reverse side it is enhanced with supplementary thread. This type of knitting is popular for production of polo shirts and plain weaving ideal for sports and leisure activities. The products made from it are breathable and easy to maintain.

INTERLOCK PIQUE

Warp knitted fabric with a pattern in which two fully interlocking rows alternate with a one-face row. One side of the knitted fabric has twilled separate stitches while the other side is plain. This type of knitting is popular for production of polo shirts and plain weaving ideal for sports and leisure activities. The products made from it are breathable and easy to maintain.

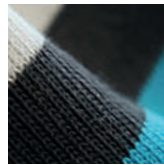

DOUBLE FACE

Double face knitting also called double-sided. The wave is densely alternating front and back uprights on the outside and reverse material sides. In the unstretched position only front stitches are visible, reverse stitches are visible only while stretched. This knitted fabric looks identically from the back and it is highly elastic in the transverse direction.

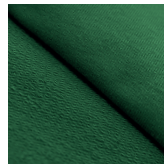

GRID KNIT

Quick-drying, breathable knit for the production of modern, functional clothing. The special grid structure perfectly moves moisture away from the body and expands it onto the fabric surface for fast drying, making it feel fresh, dry but also cooling the body. High elasticity ensures maximum comfort during wear.

RIB KNIT

Double-sided knitted fabric consisting of rib pattern indicated by 1:1 or 2:2. This information determines the ratio of regularly alternating vertical stripes of stockinette stitch with vertical stripes of reverse stockinette stitch. Rib knit fabric is elastic and it is mostly used for collars, cuffs, plackets and hem of poloshirts and sweatshirts.

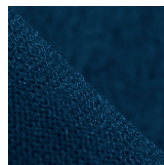

FRENCH TERRY – not brushed

Weft knitted fabric with characteristic dendritic columns on the outside and arches on the reverse side. The weave is enhanced with supplementary thread that leads along the reverse side of the fabric. The supplementary thread increases strength, absorption as well as the volume of the fabric.

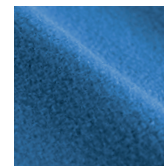

FRENCH TERRY – brushed

Weft knitted fabric with characteristic dendritic columns on the outside and brushed soft on the reverse side. Reverse side of the material enhanced with supplementary thread is fluffed by mechanical process. Such way treated surface has a larger volume and shows warmer properties.

STRETCH FLEECE

Smooth outside, brushed inside functional stretch knit fabric with great thermo isolating properties. It is soft, lightweight, breathable and quick-drying material. It is suitable for sports and physical activities. Inner part of the material has anti-pilling finish.

FLEECE

Weft knitted fabric characteristic with brushed dense teased soft surface on both sides of the material. It has outstanding insulating attributes, long lifetime and easy-care. Material can be treated with anti-pilling finish. Products are suitable for embroidery and laser engraving.

PLAIN WEAVE

Plain weave fabric is made of strong, regularly repeating weave that has the same appearance on the outside and reverse side. With its simple and dense interlacing, it creates a steady and smooth surface suitable for printing and embroidery. Plain weave fabrics are manufactured from high quality combed cotton or polyester.

POPLIN

Mostly used type of material for shirts production. It is extremely soft, pleasant to the touch, though stiff enough. It is made by a plain weave wave which has a higher amount of warp than weft threads.

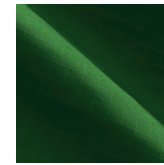

MICRO TWILL

The use of two-fold composition yarn with high density 100/2 occurs a very petty threading. This creates a thin, but effective diagonal lines that gives the twill weave an elegant and modern look. It is a popular non-wrinkling fabric with high breathability and soft feeling.

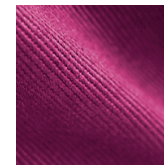

OXFORD

Wave derived from canvas wave. The difference is that there are at least doubled yarns alternating when fabricating the fabric. Oxford is shinier than canvas. It has a wide range of use. It can be made from natural or synthetic yarns.

RIP STOP

Very strong regularly repeating wave. In this smooth fabric are interwoven thick warp and weft threads in the intervals of 5 - 8 mm. The surface gets an effect of a grided structure. This imaginary grid significantly increases the fabric rip and tear resistancy.

TWILL

Wave characteristic by diagonal spacing that is regularly repeated. It consists of alternating the system of warp and weft yarns. The fabric is very robust, tear-resistant and easy-care. The most common use of twill wave is in denim or workwear. The material is also popular for caps production. It can be smooth or brushed. The brush finishing makes the surface softer with matte appearance.

TERRY

Loop fabric consists of solid loops on both sides of the material. It is a three-dimensional fabric with very soft touch and excellent absorbent properties. It is ideal for towels and bath towels production in the material composition of 100% cotton or blend of bamboo fiber and cotton.

NONWOVEN FABRIC

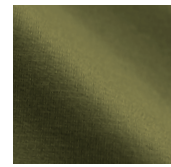

Fabric produced without knitting or weaving. Input material is a polypropylene polymer melt. The result is a smooth, flat, porous fabric with a relatively high tensile strength and low abrasion and bending strength. The material is popular in the industry due to low acquisition costs and good filtration and insulation properties.

FINISHES

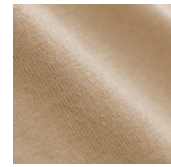

PRESHRUNK COTTON

During the production process of cotton products the space between the fiber gets reduced which eliminates the risk of shrinkage of the fabric during the washing and drying cycle. This process allows the final product to be washed at high temperatures for the purpose of removing any impurities and bacteria.

MERCERIZED COTTON

The process of mercerization consists of immersing the cotton yarn into a bath for the purpose of changing their sections and leveling uneven fibers. The fiber cross-section thus obtains an almost perfect shape. The final material becomes smoother shinier and softer. Mercerization results in higher strength and better color stability of the material.

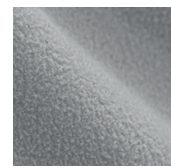

SILICONE FINISH

The silicone finish is similar to the effect of fabric softener, however longer lasting. It makes the product soft to the touch, more dirt-proof and the prints stick much better.

EASY CARE

The surface finish based on modification of the cotton fiber cellulose, which increases the flexibility of the material. It prevents the creases while wearing and washing cycles, thereby reducing wrinkling, easier ironing, shape stability and dimension stability.

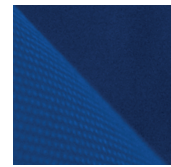

ANTIPELLING FINISH

Antipilling finish minimizes the release of fibers and prevents fabric's pilling. This process results in fibres fixation and stabilization. It reduces damaging of the upper part under excessive use and friction and extends the product lifetime and functionality.

PU FINISH

A long-lasting polyurethane layer that is applied from one side of the base fabric. It provides water, moisture resistance, abrasion and dirt resistance. Due to the special composition, the layer is very flexible, lightweight and does not negatively affect the other properties of the product.

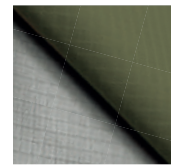

PA FINISH

Acrylic treatment is used to improve the mechanical and practical properties of the fabric. It is mainly used in outdoor clothing and is characterized by wind resistance and tensile strength.

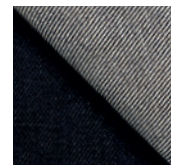

TPU LAMINACE

Durable top layer made of thermoplastic polyurethane ensures stability of material properties in a wider range of conditions. The combination of the TPU membrane and the top material maintains the flexibility of the product and provides waterproof and abrasion resistant surface with excellent bend and tensile strength.

SILVER COATING

A special matte silver coating applied from the inside of the fabric improves the functional properties of the material. It increases water resistance, prevents transparency of the top material and increases resistance to damage potentially caused by washing.

ANTI-SOILING FINISH

The ability of the top material to repel liquid, dirt and greasy dirt, which you will appreciate especially in the work environment. Dirt or grease make the droplets on the treated fabric that can be easily wiped off, thereby extending the life of the product.

NEW COLOUR

For information about stock availability please contact our sales department.

MATERIALS

ELASTANE

A synthetic fiber that contains polyurethane bonds of high elasticity.

ORGANIC

Cotton produced from ecologically controlled agriculture and further processed under the strict inspection of all manufacturing processes.

MERINO

Merino wool is world renowned for its soft, yet firm feel, offering advantages in every area over common wool and many other fibers.

THREE-LAYERD SOFTSHELL

Three-layerd softshell with membrane

DOUBLE-LAYERD SOFTSHELL

Double-layerd softshell

RECYCLED POLYESTER

The fibers are made by recycling consumer plastics.

TYPES OF LABELS

TEAR OFF

Tear off label.

STICKER LABEL

Label in a form of a sticker. Can be easily taken off.

LABEL FREE

The products have only a small size label behind the neck for easy rebranding

MATERIAL PROPERTIES

WINDPROOF

Windproof material prevents wind and chills from penetration.

WATERPROOF

Rating in millimetres to indicate material's resistance to water pressure. The higher the water column is, the longer the fabric will remain waterproof.

EXTRA DRY

Extra dry material.

BREATHABLE

Rating in g/m² per 24hours. The ability of a fabric to allow moisture vapor in grams in square meter per day. The higher the value is, the better fabric breathes.

COOL/WARM

Soft, easy care, quick-drying and conductive fabric.

THERMOREGULATION

Keeps you warm when it's cold and reversed.

ODOR RESISTENCE

Thanks to moist absorption it keeps sweat out of your skin and therefore it's antibacterial. The clothing stays fresh longer.

MATERIAL FINISHES

SILICONE FINISH

The silicone finish is similar to the effect of fabric softner, however more lasting. It makes the product soft to the touch, more dirt-proof and the prints hold much better.

ANTIPELLING FINISH

The antipilling finish lowers the pilling tendency of the fabric.

ANTI-SOILING FINISH

The ability of the top material to repel liquid, dirt and greasy dirt.

EASY CARE

Surface finish eliminates fabric wrinkling to provide product easy care.

TYPES OF SEAMS

FLAT SEAMS

Double-sided cover stitch which is flat ensures maximum wearing comfort.

TAPED SEAMS

Technology supporting the waterproofness of material at seams. The waterproof tape is applied thermally under pressure over the inside seams.

MULTIFUNCTION PRODUCTS

3 IN 1

Multi use jacket can be worn as one whole winter jacket, or separately as a windbreaker and a fleece

4 IN 1

Multi use Hi-Vis workwear jacket can be worn as one whole, upper and inner part separately, or just the upper jacket without sleeves as a vest

RIMECK®

Selected garments from the collection HIGH VISIBILITY (HV) Rimeck correspond to the international standards, which determine the optimal form of protective Plaining with high visibility. Certified garments from the HV collection are supplied with a leaflet providing information on proper storage, treatment and purpose.

EN ISO 20471:2013 – High visibility Plaining – this international standard specifies requirements for Plaining with high visibility, which is able to visually indicate the presence of a user for vehicles or other mechanized means of transport under any light conditions, both in daylight and when illuminated by headlights of vehicles at night.

High visibility Plaining are made of fluorescent material, and in combination with reflective stripes are divided into three categories:

Category 3 – the highest level of protection – the minimum required substrate surface is 0.80 m² and 0.20 m² of retroreflective material.

Category 2 – the medium level of protection – the minimum required substrate surface is 0.50 m² and 0.13 m² of retroreflective material.

Category 1 – the minimum level of protection – the minimum required substrate surface 0.14 m² and 0.10 m² of retroreflective material.

EN 1150:1999 – Protective Plaining – caution Plaining with high visibility for non-professional use – standard specifies requirements for optical properties of caution high visibility Plaining suitable for adults or teenagers, not for professionals. The garments are designed for visual indication of the presence of users in all light conditions, both in daylight in urban lighting and when illuminated by headlights of vehicles at night.

EN 343:2003+A1:2007 – Protective clothes – Rain protection – European standard determining the properties of fabrics and seams of a protective garment. The characteristics of these are measured for the outside of the clothes. After achieving the specific permeability requirements and reaching the appropriate certification, it provides protection against water penetration and resistance against steam penetration for the wearer.

EN ISO 13688:2013 – Protective Plaining – this international standard specifies the general requirements for the implementation of protective workwear in terms of ergonomics, safety, size designation, aging, marking of protective Plaining and the information which is supplied by the protective Plaining manufacturer.

EN 14404:2004+A1:2010 – Personal protective equipment – Knee pads for kneeling work – The standard specifies requirements for knee protection for kneeling work where there is a risk of injury due to surface mechanical effects. The protectors must be harmless to health and safe for the users.

TYPE 2 – foam plastic or other filling material in trouser pockets, or permanently attached to trousers.

LEVEL 0 – only suitable for use on a flat surface – does not protect against punctures

LEVEL 1 – suitable for use on flat or uneven surfaces – protection against puncture with a force of at least (100 ± 5) N

LEVEL 2 – suitable for use on flat or uneven surfaces in demanding conditions – protection against puncture with a force of at least (250 ± 10) N
