

RIMECK®

Workwear made real

Working clothes aren't decided on just by high demands of professionals who wear them every day. Fashion trends rule there as well. It's no wonder; after all, we spend most time of the day at work and deserve to look and feel good. That's why we keep moving the boundaries, devoting ourselves to design, improving the quality, style, functionality and, above all, safety in the Rimeck brand. Our HIGH VISIBILITY line is ideal wherever safety at reduced visibility is of paramount importance.

After all, its qualities are certified by certification based on European standards. In addition, the new VERTEX collection is a perfect example of how customers' needs are reflected in our products. We left nothing to chance when designing them and didn't allow any compromise. So, whatever you experience during your work commitments, you'll appreciate their resilience, smart design and function materials.

VERTEX

luxury collection by RIMECK®

The new VERTEX collection combines technologically advanced fibers, comfort and an outdoor look. Workwear can thus be highly durable, flexible and stylish at the same time!

WATER RESISTANT TREATMENT

The waterproof TPU membrane resists moisture penetration very well while maintaining the flexibility of the entire material. Water column 10 000 mm.

BREATHABLE MATERIAL

The 3-layer material helps to regulate water vapour, reliably moving it away from the body and creating a feeling of comfort. Breathability of 4,000 g/m²/24 hours.

THERMAL REFLECTIVE ZONE

Thermo reflective zone on the back.

CORDURA

The use of CORDURA® material makes the trousers even more resistant, especially against punctures or tears.

CERTIFICATION

EN ISO 13688:2013 – Protective Plaining - this international standard specifies the general requirements for the implementation of protective workwear in terms of ergonomics, safety, size designation, aging, marking of protective Plaining and the information which is supplied by the protective Plaining manufacturer.

EN 14404:2004+A1:2010 – Personal protective equipment - Knee pads for kneeling work - The standard specifies requirements for knee protection for kneeling work where there is a risk of injury due to surface mechanical effects. The protectors must be harmless to health and safe for the users.

SEPARATED POCKET FOR EASY BRANDING

The pockets of these polos are delivered separately, allowing easy branding on them. Printing and embroidery has never been easier.

PRESHRUNK COTTON

During the production process of cotton products the space between the fiber gets reduced which eliminates the risk of shrinkage of the fabric during the washing and drying cycle. This process allows the final product to be washed at high temperatures for the purpose of removing any impurities and bacteria.

New product. More information about stock availability will be provided by our sales department.

RIP STOP

Very strong, regularly repeating weave. In this smooth fabric, thick warp and weft threads are interwoven in intervals of 5 - 8 mm. The surface gets an effect of a grided structure. This apparent grid significantly increases the fabric's resistance to ripping and tearing.
